

From Chairman's Desk

Seminar Sub-Committee

We have been organizing Technical Seminar every year for about last three decade to update our knowledge regarding latest technological advancement in the field of utilisation of electrical power.

Professionals, Consultants, Academicians, Experts are also invited to take active part in our technical seminar by presenting their papers on the related topic, which makes the Seminar more useful and comprehensive.

“Sportslighting Systems - Approach, Design and Execution” was the topic of this year’s Technical Seminar. Good quality sportslighting makes the playing arena live during the night. This is essential not only for the players to perform their best but also for the visual comfort of the spectators. Apart from this, millions of people watch the live telecast of the games far away from the actual playing arena. Proper design and execution of Sportslighting ensures good quality images being transmitted on T.V. network. Games like Cricket, Soccer, Hockey, Tennis etc. have become more popular now-a-days due to live telecast, which would have not been possible without good quality sportslighting.

Therefore the topic of the Seminar is of vital importance at the present time and to up date the knowledge not only the budding Engineers of our Department, it will enrich the other audience present.

Salient features covering Approach, Design, Execution, Operation, Maintenance and Commissioning of modern sportslighting systems have been elaborately discussed during the Seminar and included as the special feature in our journal.

I take this opportunity to convey our sincere thanks and gratitude to all the participants/organisation who have taken active part in the Seminar and provided their support to make the Seminar success.

Kolkata, the
30th May, 2009

A.K. Ghosh
Chairman
Seminar Sub-Committee
